

# Cupertino Electric

## Business objects implementation

### CLIENT

For over 50 years, Cupertino Electric, Inc. has established itself as a premier provider of electrical turnkey solutions. They are now a leading force at all levels of project design, development, management, installation and commissioning.

Staff: 1 800 employees

### PROJECT

- **Select the business intelligence tool**
- **Define goals / project planning**
- **Install the products**
- **Design the data base - usual mistake is to think you just need to plug BO and you are done!**
- **Load data**
- **Create BO universes and reports, use scheduling**
- **Optimize data base. Must take into account the flexibility of BO**
- **End user training**
- **Key Figures:**
  - Duration: 90 days
  - Billing: 400 hours
  - Team: 1 Project Director, 1 Project Manager, and 1 Consultant
  - Budget: \$50,000

### REQUIREMENTS & OBJECTIVES

- The Customer wanted a new Data Warehouse system but didn't have the resources and knowledge to efficiently implement Business Objects
- Our consultants set up the reporting tools and processes, helped validate the data and design the data base, created reports, and trained the users
- **Objectives:**
  - Design a new Business Intelligence solution using SQL Server Analysis Services and WebIntelligence
  - Focus on the semantic layer using BO Universes
  - Ensure a long-term efficiency by involving / training the company personnel
